TSS Grammar Updated

Program ::= Stmt$^+$

Stmt ::= Tag -= (Tag Reference* | Taglist Reference*)$^+$;

Taglist ::= Tag [ ]

Tag ::= <Name : Flag>

Reference ::= (*Name)

Name ::= ident

Flag ::= SO | RO | I | D | IA | DA | S | B

Following statements will tell us how to parse idents. This is how we can control the way user can name their Tags.

Ident :== ident_start ident_part*

Ident_start :== A....Z | a ... z

Ident_part :== ident_start | (0...9)

Separator :== ; | [|] | (|) | -= | < | > | *
